

IOT

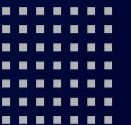

DEVELOPMENT
COMPANY

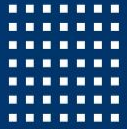

WITH INNOVATIVE, _____
AND CONNECTED IOT SOLUTIONS,
_____ WE CHANGE BUSINESSES GROWTH

The Internet of Things (IoT) is an idea from the future: connecting devices to a computer network to make them "intelligent" and interlinked. These connections allow us to collect and exchange data, control devices or set a device's rules of action remotely. IoT makes life easier for humans in their daily activities.

OUR FULL-STACK IOT SERVICES

IoT Support & Implementation

IoT Gateway Development

Sensor Connectivity

Hi-End IoT Solution With Rich Architecture

Connectivity With Wearable Devices

App Security Consulting

Voice Enabled Technology Solutions

IoT Cloud Platforms

IOT MAINTENANCE SERVICES

RESULT-ORIENTED IOT DEVELOPMENT SERVICES FOR ALL INDUSTRIES

Beat your opponents with a feature-rich IoT-based application and improve your business ROI 2x times faster. KrishnaPadam IT Solution serves all industries with top-notch IoT development solutions.

LOGISTICS

We develop IoT-enabled apps that enable real-time fleet management and greater transportation efficiency for the logistics industry.

Vehicle Parts Monitoring

Security, surveillance, and safety

Real-time Monitoring

FOOD AND BEVERAGE

Our IoT development services help monitor the stages of food production and the state of food products, provide real-time information, and take necessary steps to reduce food waste.

Betterment of Food Safety

Distinct Supply Chain Process

Efficient Logistics Performance

Saving Energy Consumption

CONSTRUCTION

As IoT in the construction industry becomes more widely available, they significantly influence how the industry pivots. Applications of IoT in Construction:

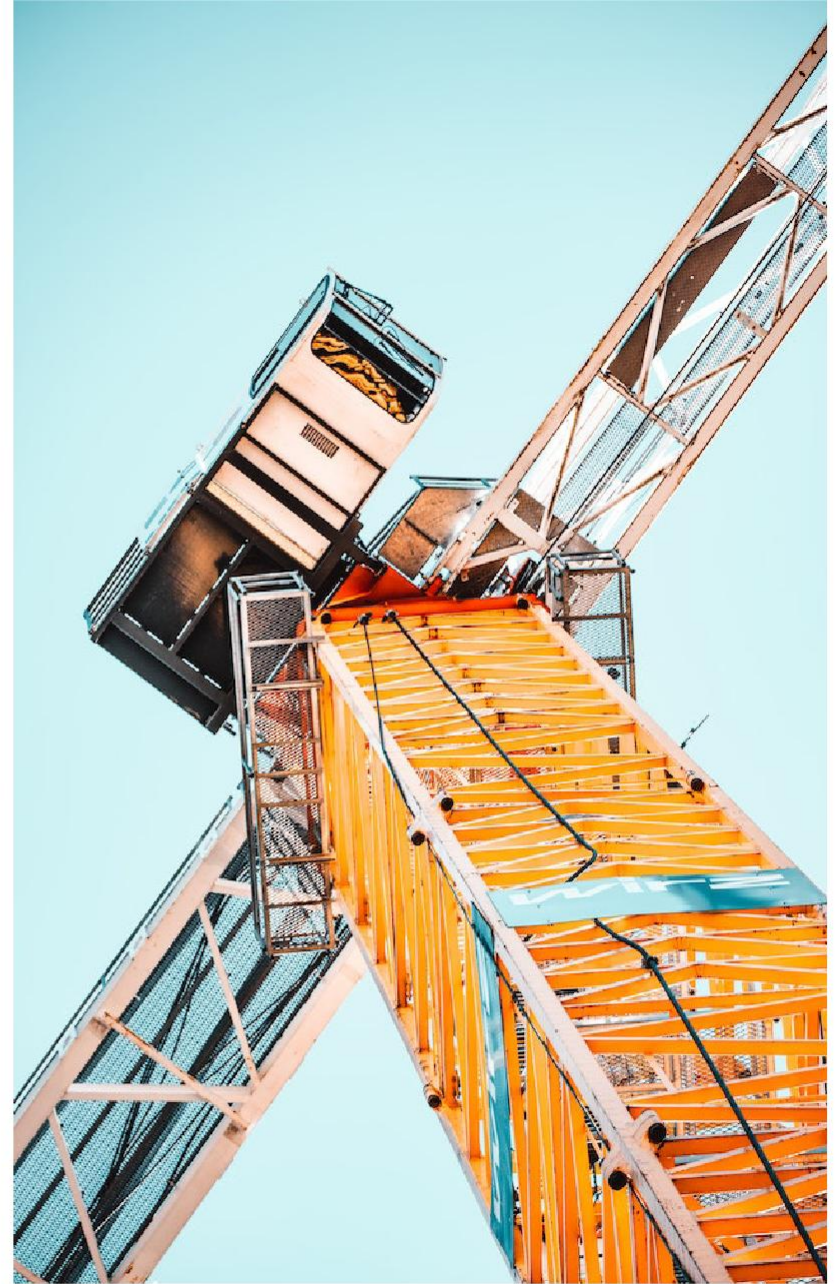

Sensors

Maintenance
Systems

Real-Time
Site Map

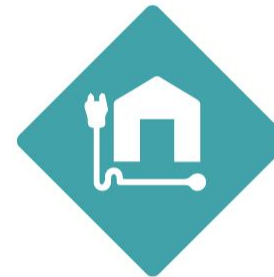

SMART HOME & WORKPLACE

We provide IoT development services for smart homes & workplaces that directly transform our lifestyles.

Controlling
home access

Managing home
appliances

Measuring home
conditions

HEALTHCARE IOT SOLUTIONS

We offer IoT application development services for the healthcare industry that allow remote Monitoring, deliver better patient care, and capture patients' vitals via IoT devices.

Simultaneous reporting and Monitoring

Data assortment and analysis

Tracking and alerts

RETAIL

We develop IoT applications for retail companies that help analyze customer behavior, provide a better in-store shopping experience and boost revenue.

Improving the customer experience

Better inventory traceability

Improving the in-store experience

AGRICULTURE

We build IoT systems for monitoring crops and field conditions in real time.

Monitoring of climate conditions

HOW DOES IOT (INTERNET OF THINGS) WORK?

Technology that Connects Humans

Connected devices are now far more than consumer products for smart homes. Although growing user adoption is certainly a good sign for the Internet of Things, what's equally exciting is how it impacts companies across industries. Nowadays, IoT mobile app development has become popular for the many benefits it offers. Learn more about IoT development, possible applications, and services available for your company.

ATM BAR

ATM Bar is an automatic machine where we don't need human interaction. The user inserts the card, selects the quantity, and pours it.

FEATURE:

Load up Your Card

Explore and Pour

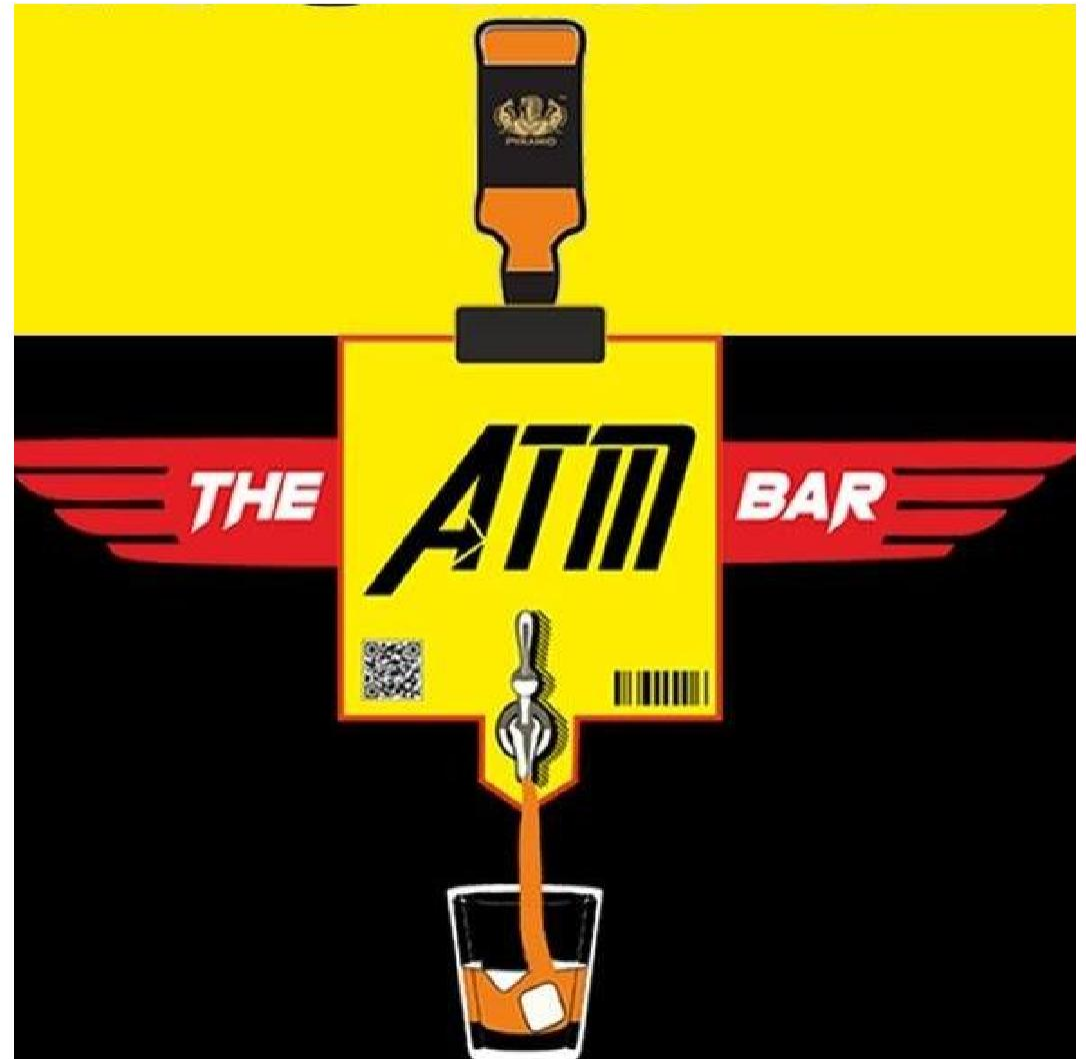

Most Secure

Most Reliable system

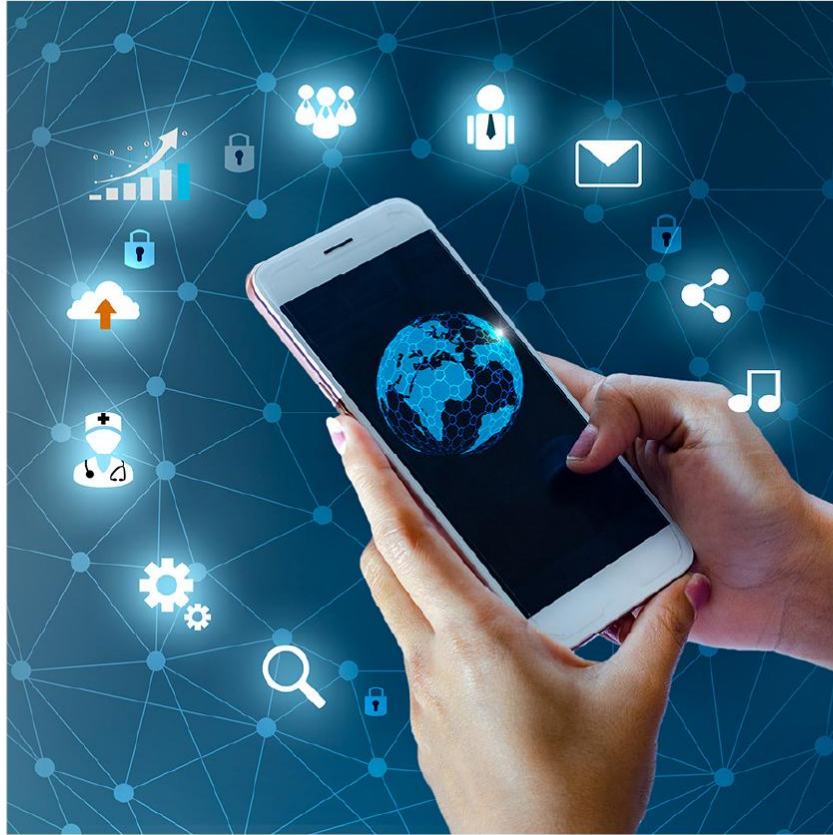

Superior Reporting

MOBILE DEVICE MANAGEMENT SYSTEM

Our easy-to-use Mobile Device Management System allows you to manage and monitor all your devices from a single dashboard, giving you complete control over your mobile device fleet. It lets you manage smartphones, tablets, laptops, desktops, TVs, rugged devices, and multiple operating systems such as Android, iOS, iPadOS, tvOS, macOS, Windows, and Chrome OS.

OUR MDM SOFTWARE DEVELOPMENT SERVICES

App Management

Data Management

Zero-Touch Deployment

UEM

Mobile Security

Inventory Management

FEATURES OF MOBILE DEVICE MANAGEMENT (MDM) SOFTWARE

Our Mobile Device Management Solutions enable you to monitor, manage and secure your employees' mobile devices used for work. Following are our key offerings for Mobile Device Management.

Device identification

Device configuration

Device activity tracking

Centralized Dashboard

Email Protection

Geo-location Tagging

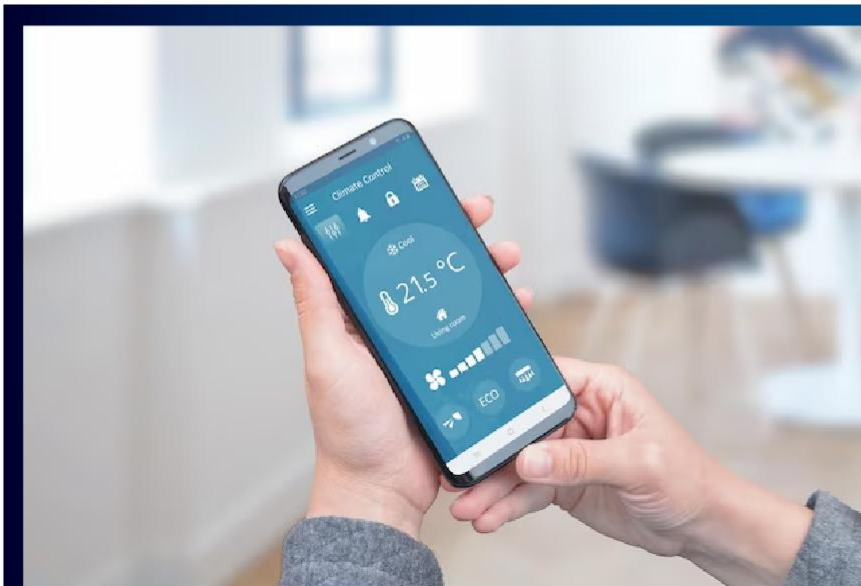

Data security

Remote security actions

AIR QUALITY DEVICE

Our IoT-based Air Quality Device is an ideal solution that can provide real-time data and insights about the air quality in a particular area. This IoT-based air pollution monitoring system comprises several hardware and software components that collect and process data.

FEATURES

1

Sensors that detect temperature, humidity, and particles

2

The information provided through the app

3

History data can see by numbers and graphs

4

The app gives alerts for pollution

5

Continue monitoring the environment of spaces

MHOOTER (EMERGENCY ASSISTANCE DEVICE)

mHooter is a mobile app designed to fulfill the security needs of common citizens of Indian societies. Our innovation is based on the smart city concept, which gives you the option of safe and smart living. It combines a mobile app and an electronic device based on the most advanced Internet of Things technology. It gives you safety with a Single Tap on your mobile.

FEATURES

World's first community policing app.

1

Easy to use technology (a single tap on an emergency button for 5 sec).

2

Whole community at your help.

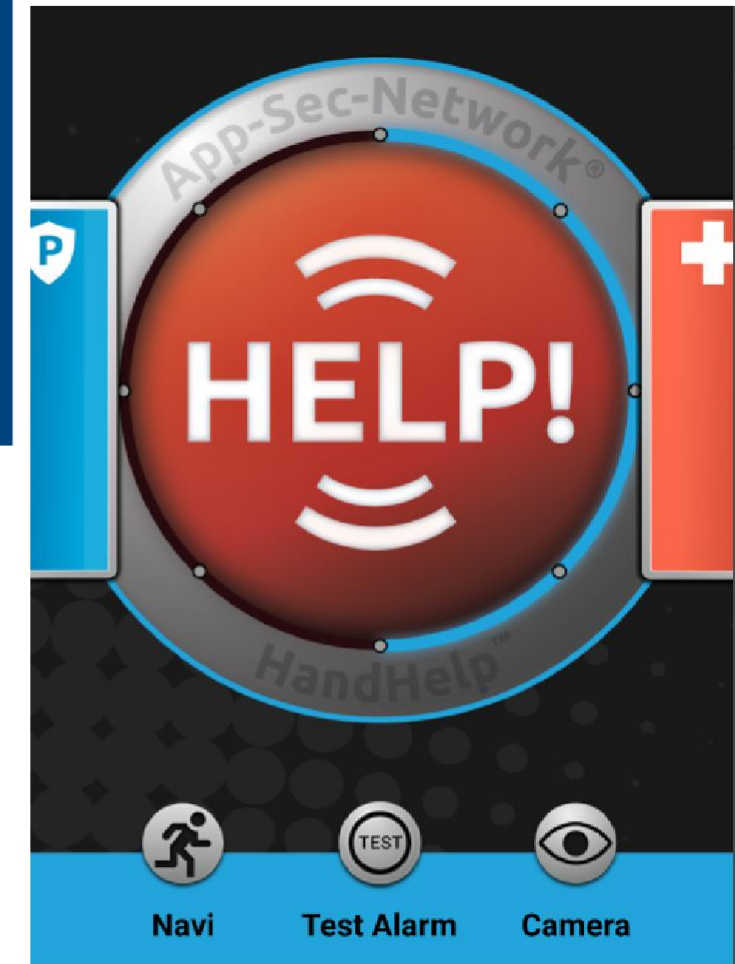

4

Instant notification to SOS (friends, family & relatives) contacts.

3

Instant assistance from police in case of theft/ burglary, ambulance in case of medical issues, and firebrigade in case of fire.

5

MLATCH (ACCESS CONTROL DEVICE)

mLatch is made to protect the doors and windows of your premises from intrusion. It is built to mount on any window or door of your premises easily. Get a notification on any mobile phone instantly before getting burglars into your home.

FEATURES

Indoor wayfinding

Secure access control

Instant confirmation

Convenient interaction

No physical ID

Can make changes to the lock password simply by editing or deleting requests.

AWS (AUTOMATIC WEATHER STATION)

This application helps to measure and gather atmospheric conditions like air temperature, humidity, moisturizer, light intensity, rainfall, ultraviolet (UV) radiations, barometric pressure, solar radiation, wind speed and direction, cloud height, and other abnormal conditions.

FEATURES_____

It gives high accuracy and reliability for weather monitoring and climate change.

It uses renewable energy sources like solar panels for charging the connected battery.

Through the web, it accesses real-time weather information and data.

Low maintenance is required for end users.

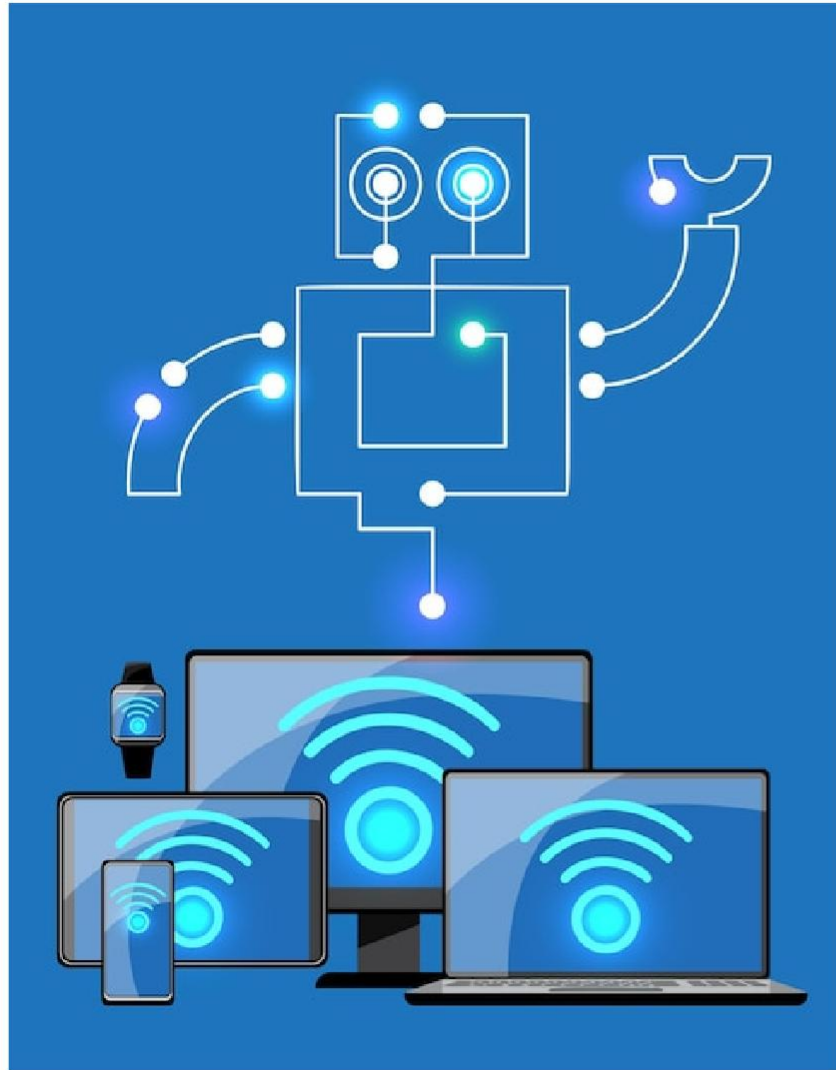

It can store data and provide it to the users as required.

THE SCOPE OF INTERNET OF THINGS (IOT) DEVELOPMENT SERVICES

IOT SOLUTION CONSULTING

IOT DEVICE NETWORK CREATION AND MANAGEMENT

1

Selection of suitable IoT devices.

2

Configuring IoT devices and connecting them to the network.

3

IoT devices monitoring and diagnostics.

EDGE COMPUTING SETUP

Creating an edge infrastructure consisting of several servers placed across a network.

Grouping IoT devices through an edge device.

Setting up advanced analytics and reporting tools.

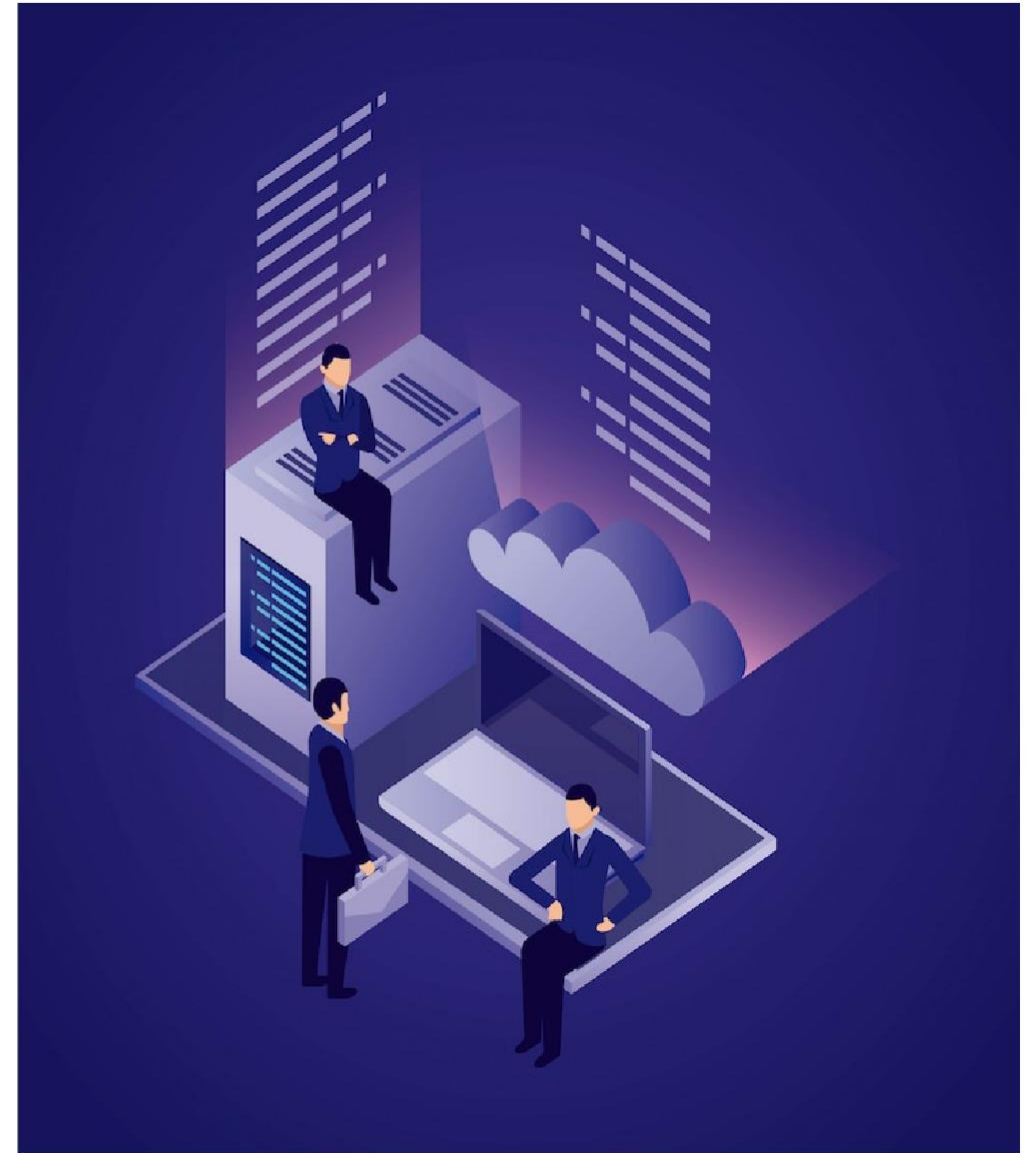

DATA CENTER IMPLEMENTATION

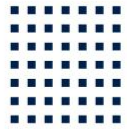

Designing and creating a data processing environment for heterogeneous IoT data.

Building machine learning and data science algorithms to identify data patterns and trends that help solve specific problems in IoT-based equipment conditions, operations, etc.

DEVELOPMENT OF IOT DATA VISUALIZATION APPS

01

Diversity of web and mobile apps to serve IoT visualized data insights, including VR/AR apps.

02

Multiple visualization techniques (e.g., bar, pie, funnel, connectivity charts, heat maps).

03

Tailored reports and dashboards on IoT data for different user roles (managers, data experts, etc.).

04

Customizable IoT data visualization (adding new data sources, configuring additional reports, etc.).

DEVELOPMENT OF REMOTE CONTROL APPS

01

Design of rule-based and machine-learning-based remote control apps (web and mobile).

02

Remote control app configuration and integration with IoT devices.

QA AND TESTING

01

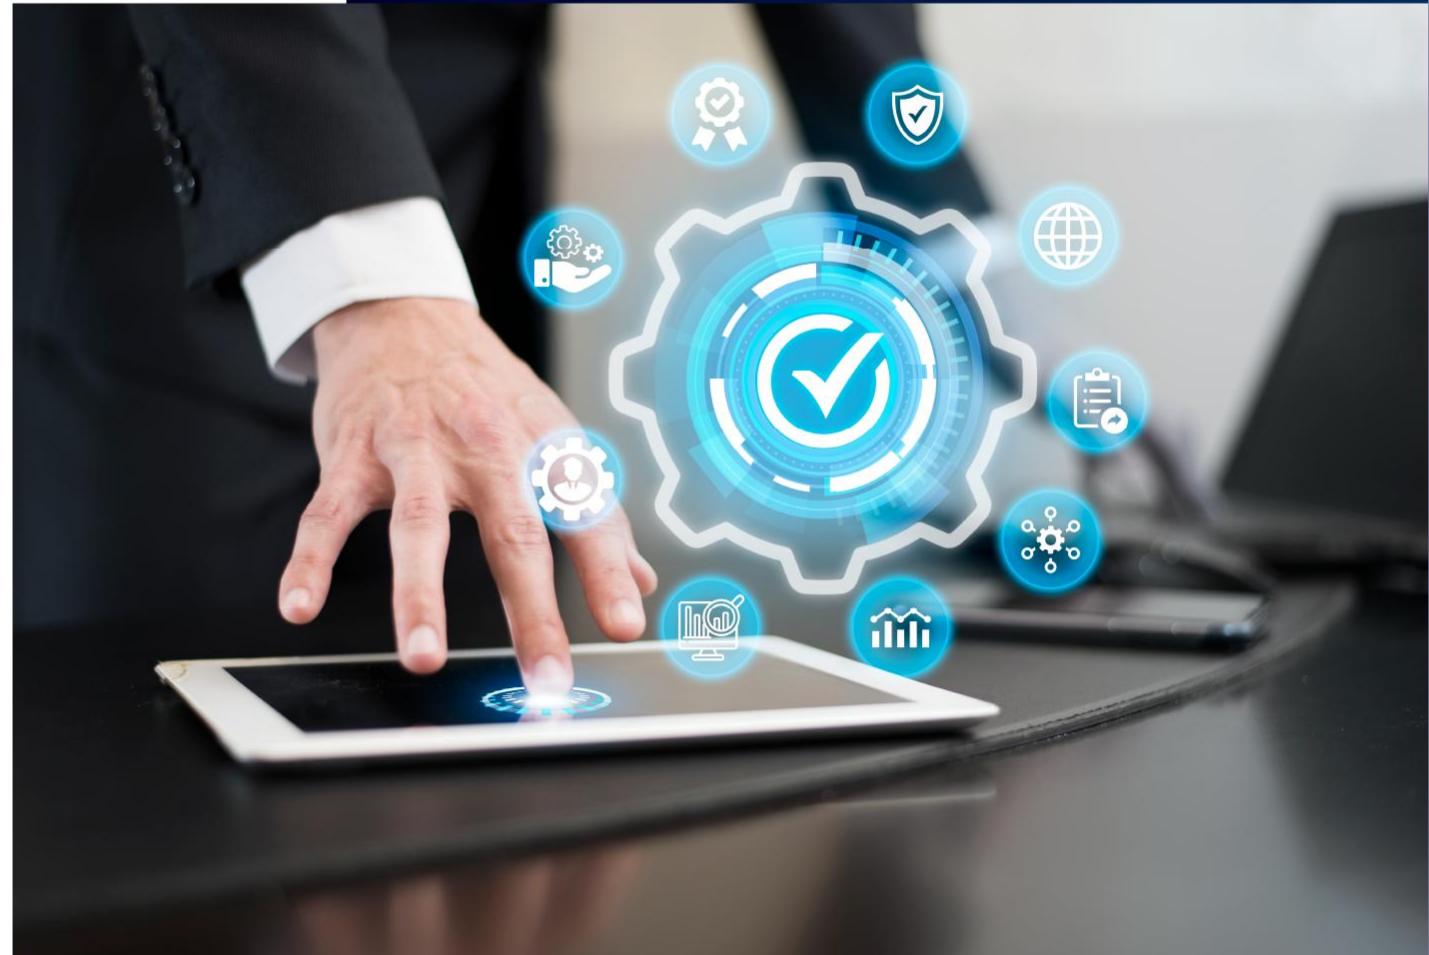

Comprehensive verification of requirements for the IoT solution and its architecture.

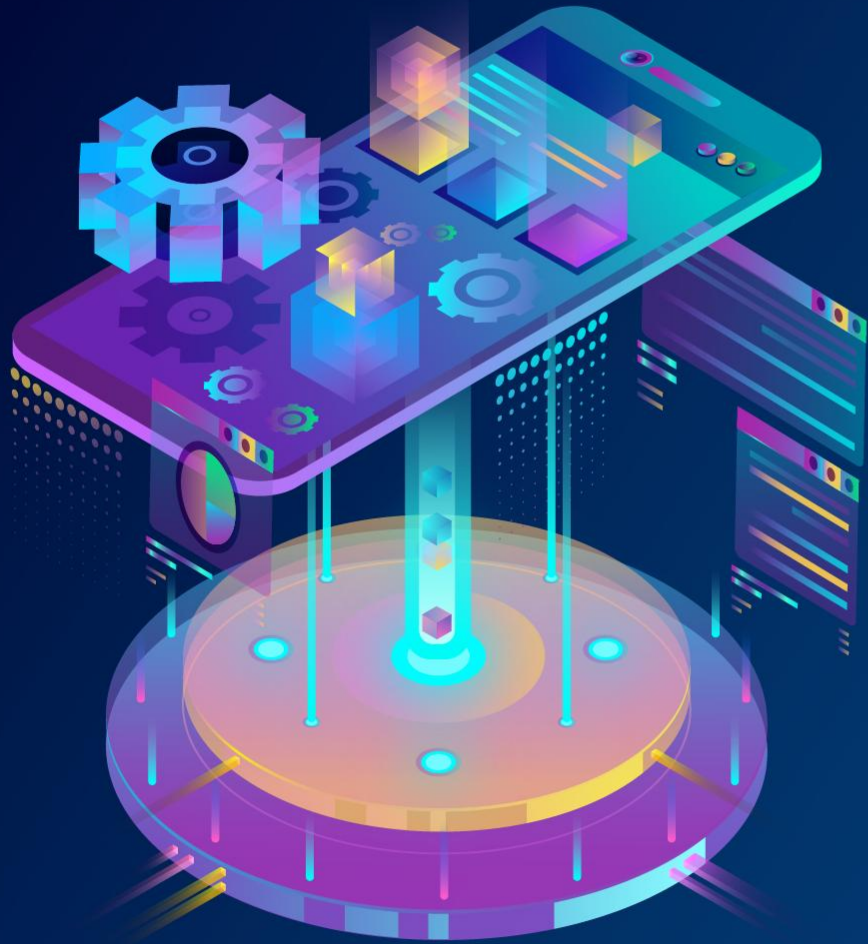

02

Well-structured and well-documented code, regular code reviews, and unit testing.

03

Testing automation to increase test coverage and eliminate regression errors in the IoT solution.

IOT APP MANAGEMENT AND SUPPORT

01

Identifying and fixing data quality, IoT application availability, and usage issues.

02

Assess and address network, server, database, and application vulnerabilities.

03

IoT infrastructure compliance review.

04

Adding new functionality to IoT apps.
